

Index

- abacus
 - and burning down of British parliament, 74
 - and exchequer, 397
 - and Roman numerals, 394
 - cannot represent irrational numbers, 398
 - could not be used to solve quadratic equations, 398
 - Dickens quote, 397
 - problem not with zero but with non-representables in algorismus, 397
 - Shakespeare quote, 397
 - victory of zero took a long time, 397
 - vs algorismus, xl
- Abul Fazl, 308
- Ibn al-Ādamī, 394
- ahargaṇa*
 - and Julian day-numbers, 221
- Ain-i-Akbari*, 308
- Ajātasattu, 85
 - question, 84
- Akṣapāda Gautam, 81
- Alexander
 - no royal road to geometry, 12
- Algebra* of Al Khwarizmi, 124
- algorismus, *see also* al Khwarizmi, 309, 310
 - and Florentine trade, 396
 - and representation of real numbers, 393
 - delayed acceptance in Europe, 275
 - Gerbert's failure to understand Indian numerals, 395
 - Indian numerals known in West since 7th c., 395
 - vs abacus, xl
- Algoritmi de numero Indorum*, 395
- Almagest*, 334
- anumāna*, 63, *see also* inference, 89
- Apology*, 279
- Archimedes, xxxvi, 150
 - computation of π , 192
 - earliest work (palimpsest), 192
 - how accurate is Heiberg's reconstruction of palimpsest?, 192
 - little actual knowledge of his work, 192
 - mentions Euclid according to "Proclus", 11
 - younger than Euclid, 11
- Aristotle, 69, 84
 - distinction between math and physics, 66
 - logics prior to him which he should have known, 81
 - math different from physics, 30
 - mathematicians vs physicist, 29
 - of Stagira vs Aristotle of Toledo, 39, 46
 - separating geometry from physics, 29
 - theory of syllogisms and Nyāya, 47
- Arkand*, 394
- Arnol'd, V. I., xxxv, 112
- Āryabhaṭa, 122, 127, 130, 223, 326
 - 24 sine values, 126
 - absurdity of Western claim that his sine values are derived from Ptolemy's chords, 129
 - algorithm for computing square root, 128, 129
 - algorithm for computing square root probably pre-dates him, 130
 - and square root method for computing π , 149
 - as contemporary of Proclus, 123
 - āsanna* and the "irrational nature" of π , 124
 - calculation of trigonometric values, 135
 - convenient radius of circle from value of π , 128
 - definition of area, 123
 - Delambre on his use of second sine difference, 133
